## PROFILE

Proactive Informatics student at Universitas Indonesia (6th semester, GPA 3.87). Demonstrated hands-on experience in full-stack development (React/Next.js, Node.js) and microservices architecture, with strong adaptability to new technologies. Seeking a Software Engineering internship to contribute technical expertise, problem-solving skills, and a passion for continuous learning to a dynamic team.

## EDUCATION

### Universitas Pembangunan Nasional "Veteran" Jakarta

Bachelor of Informatics

South Jakarta, Jakarta

August 2023 – Expected April 2027

- o **Concentrations:** Software Engineering
- o **GPA:** 3.87/4.00
- o **Related Coursework:** Algorithms and Programming, Data Structures, Database Systems, Information Technology, Operating Systems, Object Oriented Programming, Platform Based Programming, Service Oriented Software Development, Software Engineering, Software Analysis and Design, Computer Architecture and Organization, Software Project Management

## EXPERIENCE

### Ministry of Communication and Digital Affairs (Komdigi)

West Jakarta, Jakarta

Software Engineer

September 2025 – December 2025

- Engineered "MANTU PSTE," a comprehensive task management solution that streamlined daily operations for the Infrastructure Team, successfully replacing complex manual spreadsheet workflows with an efficient digital ecosystem
- Spearheaded the system design phase by creating the Software Requirements Specification (SRS), ERD, and flowcharts, ensuring the final product perfectly matched user needs and business logic
- Developed a responsive and user-friendly interface using Next.js (React) backed by a robust Express.js API, ensuring a smooth experience for non-technical staff
- Implemented real-time notifications using Socket.IO, which drastically improved team responsiveness and collaboration speed by eliminating the need for manual checks
- Delivered a secure and scalable production system (deployed via Docker/NGINX) that is currently used to track tasks and generate reports, significantly reducing administrative overhead and data redundancy

### FIK UPNVJ Algorithm and Programming Laboratory

South Jakarta, Jakarta

Teaching Assistant

February 2025 – June 2025

- Mentored 65 students across 2 classes in weekly C++ practical sessions, successfully bridging the gap between theoretical lectures and hands-on application
- Delivered hands-on C++ programming tutorials covering functions, pointers, data types, and exception handling
- Contributed to a highly effective teaching team, evidenced by an end-of-semester survey where ~73% of students reported a significantly better understanding of the material post-practicum
- Provided one-on-one guidance on code debugging and algorithmic logic, and collaborated with lecturers in the end-to-end academic process, including material preparation and student evaluation

### SPE Unpad Student Chapter

Sumedang, Jawa Barat

Wordpress Developer

April 2025 – May 2025

- Built and launched the official organization website, achieving a perfect 100 Desktop Performance score on Google PageSpeed Insights through rigorous CSS and asset optimization
- Designed and maintained high-quality web layouts/templates using Elementor, focusing on aesthetic composition and mobile responsiveness (Accessibility score: 91)
- Developed 6 core pages from scratch using WordPress and Elementor, establishing a central digital hub for members, the public, and participants of the national "Boreyes 2025" competition
- Orchestrated end-to-end deployment, ensuring the site met strict design guidelines and user experience standards

### NU Care Jakarta Selatan

South Jakarta, Jakarta

Full-stack Developer

January 2025 – February 2025

- Engineered a full-stack digital philanthropy platform for NU Care Jaksel, streamlining the process for calculating and processing Zakat, Infaq, and Sadaqah (ZIS) donations
- Developed a responsive frontend with Next.js for optimal performance through server-side rendering, and integrated Midtrans Payment Gateway to facilitate secure, real-time transactions
- Architected the backend using Supabase, leveraging its authentication services and PostgreSQL database to securely manage user and donation data

**PT Sinergi Informatika Semen Indonesia (SISI) x FIK UPNVJ***Software Quality Assurance Tester***South Jakarta, Jakarta***July 2024 – September 2024*

- Developed structured testing assets (scenarios, detailed test cases, and realistic datasets) tailored to Idempiere e-Procurement workflows, ensuring alignment with vendor management and tendering processes.
- Designed and authored 34 comprehensive test cases for the Vendor Registration module of Idempiere, covering both positive and negative user journeys.
- Executed manual black-box testing across vendor onboarding and procurement workflows, validating system compliance with functional and business requirements.
- Logged defects with clear reproduction steps, annotated screenshots, and severity levels, accelerating issue resolution during sprint reviews.
- Collaborated with developers and faculty supervisors to align Idempiere system outcomes with both technical specifications and real-world procurement practices.

---

**PROJECTS****Batara (Garuda Hacks 6.0 Hackathon)***Project Lead and Full-stack Developer***South Jakarta, Jakarta***July 2025 – July 2025*

- Spearheaded a 4-person team in a fast-paced, Agile environment to develop a gamified language learning app, delivering a full prototype within a 30-hour hackathon
- Architected and implemented a fullstack solution using React Native Expo for the front-end and a Node.js/Express back-end, integrating Supabase to manage user data and game progress
- Developed core gamification features including progress tracking for various mini-games such as "Guess a Picture", "Arrange Words" and "Vocabulary" to enhance user engagement
- Designed and built 'Bara Story', a unique RPG module using Generative AI (via DeepSeek model) to create dynamic, interactive narratives that personalize the learning experience for users
- Managed project workflow and team coordination, ensuring all development and deliverable milestones were met under a tight deadline

**RS Inventory (Microservices)***Project Manager and Backend Developer***South Jakarta, Jakarta***June 2025 – June 2025*

- Led a 4-person team as Project Manager to deliver a fully functional hospital inventory microservices system within a tight 1-week deadline
- Architected and enforced separate databases for each service, following microservices best practices. Each service used its own MySQL database provisioned on Railway
- Developed and deployed 6 API endpoints, consisting of 5 core services (auth, inventory, notification, purchase, tracking) and 1 centralized API Gateway using Node.js/Express
- Integrated the API Gateway with a simulated rate limiting mechanism to manage request flow across services
- Performed full API testing and documentation using Postman, achieving 100% endpoint coverage and seamless team collaboration
- Prepared the architecture for Docker and future Kubernetes deployment, ensuring containerized and scalable service orchestration.

**KangKeliling (Garuda Hacks 5.0 Hackathon)***Project Lead and Full-stack Developer***South Jakarta, Jakarta***July 2024 – July 2024*

- Led a team in the Garuda Hacks 5.0 competition to develop a mobile app prototype supporting traveling micro-businesses (UMKM Keliling) under intense time constraints
- Engineered a real-time geolocation feature using React Native and Supabase for live vendor tracking on a dynamic map display
- Implemented the Haversine Formula for accurate distance calculation between vendors and users, enabling efficient discovery of nearby businesses

---

**ACTIVITIES AND LEADERSHIP****UKM Cuvetja UPNVJ***Head of Human Resources***South Jakarta, Jakarta***January 2025 – Present***Android Hackathon 2025***Head of Event Division  
2025***South Jakarta, Jakarta***March 2025 – July*

- Coordinated a 3-month hackathon program involving 20 teams, 79 students from 10 universities across 5 provinces, ensuring seamless event execution
- Developed the full rundown, managed real-time operations, and ensured timely delivery of all event segments across the 3-month planning and execution timeline

## **SKILLS**

---

**Languages & Databases:** JavaScript (ES6+), HTML5, CSS3, SQL (MySQL, PostgreSQL), Python, Java, C++

**Frameworks & Libraries:** Next.js, React.js, Node.js, Express.js, Vue.js, React Native, Tailwind CSS

**Tools & Platforms:** Git, GitHub, Docker, Postman, Supabase, Firebase, Figma, VS Code

**System Design & Architecture:** Software Requirements Specification (SRS), Entity Relationship Diagram (ERD), Unified Modeling Language (UML/Use Case), Flowcharts, Microservices.

**Methodologies:** Agile, Scrum, Software Development Life Cycle (SDLC).
